

HORSETOOTH

HEATING, AIR & PLUMBING

BEFORE YOU COMPARE REPLACEMENT QUOTES

Know what is included. Know what is required.

Replacing your heating or cooling system involves more than just installing equipment. Permits, inspections, code requirements, warranties, and safety updates may affect the full scope of work and the total value of your investment.

5 QUESTIONS TO ASK

- 1 Is the permit included?
- 2 Who schedules the inspection?
- 3 Are required code upgrades included in this price?
- 4 Will the system be installed to current code requirements?
- 5 Will I receive final documentation when the work is complete?

The lowest quote is not always the same scope of work.

DONE RIGHT MEANS MORE THAN INSTALLED.

Proper installation protects your home, your investment, and your peace of mind.

PERMITS

Required permits help ensure the project is completed properly.

INSPECTIONS

Inspections provide accountability and confirm work meets local requirements.

CODE COMPLIANCE

Current code requirements can impact equipment, materials, and installation scope.

WARRANTY SUPPORT

We include labor and parts warranty information and can file the manufacturer warranty information for you.

SAFETY UPGRADES

Some projects require additional items to protect your home and family.

Verify it Yourself :)

You can check local building requirements and permit information through your local building department.
